

BRITISH
SCIENCE
WEEK 2025

**What do our
bodies do with
the things we
eat?**

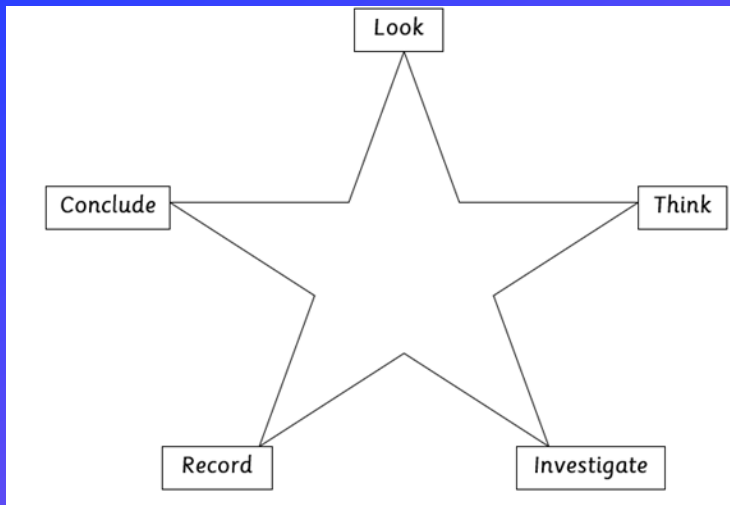

Look...

**What do our
bodies do with
the things we
eat?**

**We looked at our enquiry
question...**

Think...

We thought about, and discussed what we already knew...+

Here is what you said...

"it goes down into our digestive system"

"it goes down your oesophagus"

"not all food is waste matter because our bodies need some goodness"

"there's acid in our stomach"

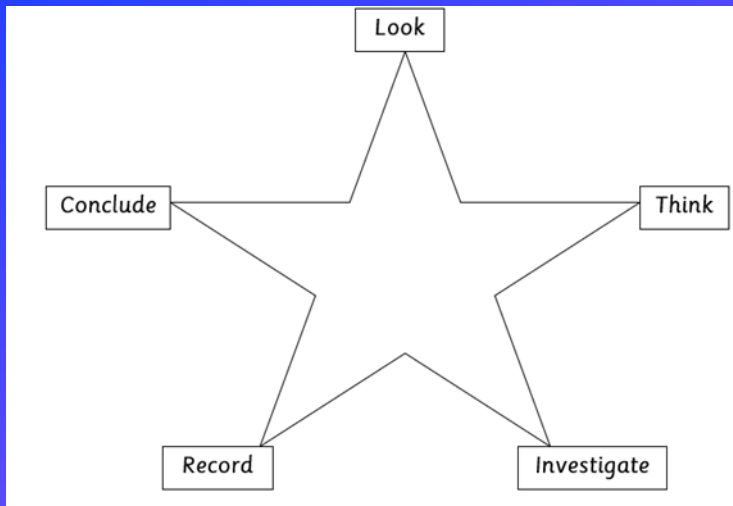

"the acid can make our stomach rumble"

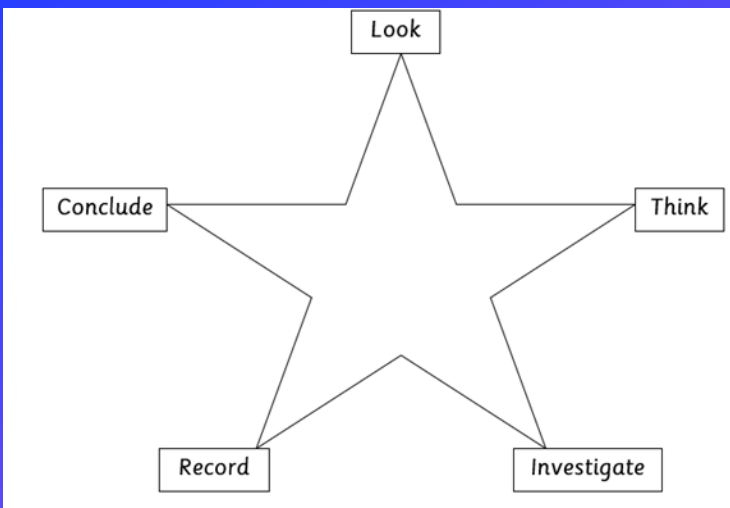

"we have a large intestine"

"we have a small intestine"

Investigate...

We learnt about the digestive system in class, learning the names of the parts of the body and the journey of food. We then used food to investigate what our bodies do with food we eat.

Record...

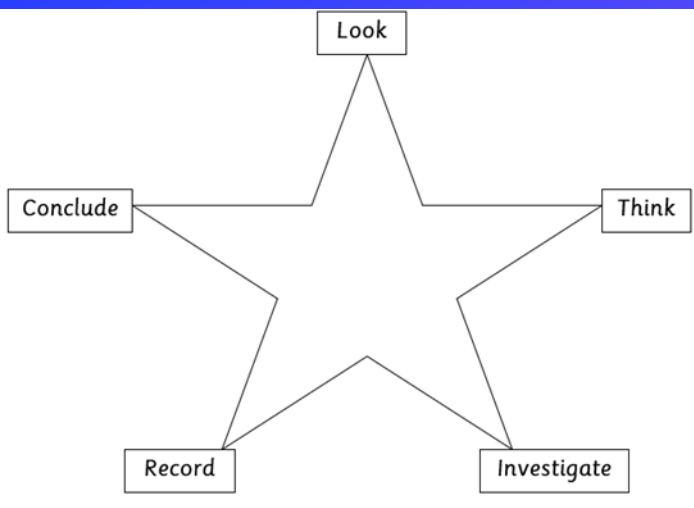

We took photographs to record our investigation to show each stage of the process of digestion...here are just a few...

Conclude...

The children made a news type video where one child interviewed another about what the class had found out in their investigations.

This concluded the work on the science star which had also become a STEM activity or problem solving, creativity, collaboration and communication.
